WORK EXPERIENCE

Cercli

Member of Technical Staff | August 2025 - Present

- Worked on the complete re-design and refactor of the Deel card dashboard, simplified the UI/UX with a more intuitive layout, and made the layout responsive.
- Implemented the Payslips and payments dashboard, collaborating across different product teams, that made our UI more user-friendly, and reduced the customer service requests by **2%**
- Built the MVP version of Expense cards, with card/spend controls, card issuance, expense reports and role based access control.
- Laid the foundation and improving the test coverage of our new products, and achieved around 50% coverage by mandating tests with every pull request.

Paradime Labs

Senior Front-end Engineer | June 2023 - May 2024

- Built a real-time parser for SQL models, simplifying the UI and reducing user friction, leading to **~5% faster** query validation and iteration
- Fixed the unit test infrastructure in the repository, and started covering key flows of the product with unit tests to improve reliability.
- Automated the audit logs generation, a key customer requirement, which led us renewing accounts with our key customers.
- Implemented role-based access control (RBAC), a key customer requirement, directly contributing to closing 2 new client deals

Rippling

Software Engineer | April 2021 - February 2022

- Delivered core inventory management features within 2 weeks of onboarding, ramping from Angular to production-grade React
- Added integration test coverage for critical flows, improving release reliability and reducing regressions
- Migrated legacy class components to hooks, improving maintainability and developer velocity
- Collaborated cross-functionally to ship MVP in ~4 months, meeting aggressive product timelines

Deel

Senior Front-end Engineer | July 2024 - August 2025

- Worked on the complete re-design and refactor of the Deel card dashboard, simplified the UI/UX with a more intuitive layout, and made the layout responsive.
- Implemented the Payslips and payments dashboard, collaborating across different product teams, that made our UI more user-friendly, and reduced the customer service requests by **2%**
- Built the MVP version of Expense cards, with card/spend controls, card issuance, expense reports and role based access control.
- Laid the foundation and improving the test coverage of our new products, and achieved around 50% coverage by mandating tests with every pull request.

Appsmith

Senior Front-end engineer | March 2022 - June 2023

- Built auto-indentation on top of the Javascript editor with visual tests, improving user experience
- Exposed window.postMessage() as a global function on the platform, which was one of the top requested features from our users.
- Supported the docs and marketing team with documentation, diagrams and examples for complex technical features, increasing feature adoption.
- Refactored Action selectors from regex to AST based parsing which improved reliability of this feature and reduced bugs by **8%**

Springboard

Software Engineer | June 2018 - March 2021

- Reduced load time of mentor dashboard from **2.5 minutes to under 5 secs**, by refactoring the vanilla JS/jQuery code to Angular, and speeding up APIs.
- Built the project submission feature on the mentor dashboard, reducing manual workflows (spreadsheets/emails) and cutting ops effort by **~40%**
- Implemented and maintained the chrome extension for job submission tracking, which , increasing submission rate by around **5%**
- Established front-end event tracking (Amplitude), enabling product analytics across all apps
- Optimized course time estimates, contributing to **~15%** increase in 6-month completion rates
